## Product Engineering

Product engineering turns our concepts into commercial reality. Our in-house team includes chartered mechanical, electronics and software engineers experienced in creating world class products in our user-led innovation process.

A fluent understanding of both enabling and manufacturing technologies, DFM and six sigma techniques maximizes our ability to deliver breakthrough solutions to market, both quickly and efficiently. Our electronics and software engineers work with most industry standard embedded hardware and software platforms using structured development methodologies. We have particular expertise developing cost sensitive consumer electronics for manufacture in the Far East.

Our development facility is equipped with the latest computer aided simulation, CAD/CAM and rapid prototyping technology. Our labs and workshops create precision prototypes and test rigs to verify our solutions and validate product performance.

However, above all it is our expertise and passion for engineering excellence that delivers success for our clients.
