## Manufacturing Processes

Achieving reliable and cost effective manufacture is a prerequisite for commercial success. Often innovation places new demands on the supply chain, requiring novel processes or radical shifts in scale or economics.

Our manufacturing engineering team is experienced at organising production at locations around the world. We source and select subcontract manufacturers and manage the design hand over, regulatory processes and quality up to product launch.

Often new products require novel manufacturing strategies and we can develop and validate these new processes in-house. This may include proof of concept demonstrations to be implemented later by a specialist automation supplier, or the supply of a complete production line utilizing custom designed manufacturing stations and test equipment for installation on our client's site.

Delivering breakthrough innovation requires attention to detail from concept to the point of sale and our expertise in manufacturing engineering ensures we can deliver this.
