Road Angel GPRS Connected Speed Camera Detector

With 80-100 speed cameras locations being added every month*, how does a driver keep track? Cambridge Design Partnership provided the answer with a turnkey development for Road Angel Group creating the Professional Connected Camera Alerter.

The device delivers a world-first for the market in a GPS road safety device with a GPRS modem for automatic wireless updates from a central server database. Users may also update the central server with information about the location of mobile camera vans as they go.

The clear and intuitive interface design keeps drivers clearly informed and even allows for message updates and device tracking. It is highly configurable and is operated with a remote control.
